

Conversion Analysis Report

1 Introduction:

This report analyses transaction data across multiple stores and SKUs to identify key trends and provide actionable recommendations. The objective is to improve overall sales performance by analysing store-level and SKU-level conversion rates.

Tasks:

1: Below is the Link Updated File of the conversion rate at both the store level and the SKU level: [Updated File Click Here](#)

2: Data Analysis:

* Store-Level Conversion Analysis:

Top 5 Performing Stores:

Store ID	Total_Visits	Total_Trans	Total_Revenue	Conversion_Rate
Store_39	9213	6124	667804.09	66.471291
Store_49	11032	7129	793523.76	64.621102
Store_44	8482	5356	467371.06	63.145485
Store_37	9458	5937	404139.26	62.772256
Store_47	9753	6081	521435.76	62.350046

Bottom 5 Performing Stores:

Store ID	Total_Visits	Total_Trans	Total_Revenue	Conversion_Rate
Store_12	8698	3310	313714.85	38.054725
Store_30	10659	4043	388411.83	37.930387
Store_36	10149	3819	431669.84	37.629323
Store_14	12804	4674	421539.55	36.504217
Store_15	8922	3090	362021.48	34.633490

* SKU-Level Conversion Analysis SKU-Level Conversion Analysis

Top 5 Performing SKUs:

SKU ID	Total_Visits	Total_Trans	Total_Revenue	Conversion_Rate
SKU_11	27856	16323	1665863.73	58.597789
SKU_7	26103	14654	1674024.12	56.139141
SKU_16	23574	12906	1234789.51	54.746755
SKU_4	24782	13505	1370489.58	54.495198
SKU_9	26715	14324	1284551.61	53.617818

Bottom 5 Performing SKUs:

SKU ID	Total_Visits	Total_Trans	Total_Revenue	Conversion_Rate
SKU_17	25295	11511	1313362.41	45.507017
SKU_8	25163	11447	1205717.50	45.491396
SKU_20	25224	11387	1165791.42	45.143514
SKU_19	25834	11440	1170544.47	44.282728
SKU_12	27687	11569	1222730.98	41.784953

Key Trends Related to Store and SKU Performance:

1: High Conversion in Top Stores:

Top-performing stores (e.g., **Store_39**: 66.47%) exhibit significantly higher conversion rates due to optimized operations or targeted strategies.

2: Large Gap between Top and Bottom Stores:

Conversion rates drop from **66.47%** (Store_39) to **34.63%** (Store_15), indicating scope for improvement in underperforming stores.

3: Consistent SKU-Level Performance:

Top SKUs (e.g., **SKU_11**: 58.60%) maintain strong conversion rates, while the gap between the top and bottom SKUs is narrower, suggesting more uniform SKU performance.

Summary

The data analysis reveals significant patterns in both store-level and SKU-level performance. At the store level, the top-performing stores, such as **Store_39** and **Store_49**, achieve conversion rates exceeding 64%, with **Store_39** leading at 66.47%. These stores excel at turning customer visits into transactions, indicating effective operations, marketing, or customer engagement strategies. In contrast, underperforming stores like **Store_15** and **Store_14** show conversion rates below 37%, with **Store_15** at 34.63%. This highlights a substantial performance gap, as the top stores convert visitors at nearly double the rate of the lowest performing ones. Addressing inefficiencies in these stores presents an opportunity to unlock untapped revenue potential.

At the SKU level, top-performing products, such as **SKU_11** and **SKU_7**, boast conversion rates of 58.60% and 56.14%, respectively, while also generating substantial revenue. These SKUs are likely in high demand, driven by factors like quality, pricing, or effective positioning. On the other hand, underperforming SKUs like **SKU_12** and **SKU_19** have lower conversion rates, hovering around 41.78%. However, the gap between top and bottom SKUs is narrower than that of stores, suggesting more consistent SKU-level performance overall. Improving the appeal of underperforming SKUs and replicating the strategies of top-performing ones can drive overall revenue growth.

To summarize, focusing on underperforming stores and SKUs, while leveraging the best practices of high performers, can significantly enhance overall performance. Regular monitoring of conversion rates and targeted interventions are crucial to closing the performance gaps and maximizing revenue.

SriMandir today has multiple business lines - Puja, Chadhava, Commerce, Travel and astro. Team today has only one PA taking care of all data requirements. If entrusted with the task of designing the ideal team structure for the data team (business analysts/PAs/data analysts) how would you go about it?

To handle SriMandir's diverse business lines, a centralized data team is recommended. Assign **one Business Analyst (BA)** and **one Data Analyst** per line (Puja, Chadhava, Commerce, Travel, Astro) for domain-specific insights. Add a **Data Engineer** for infrastructure and pipelines, and a **Data Lead** to oversee operations. This structure ensures scalability, efficiency, and tailored analytics for each business line.
